

SECURITY CHEAT SHEET

Accessing your accounts using your mobile app is secure

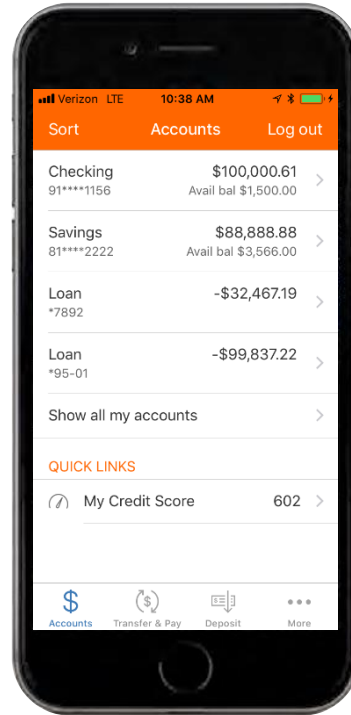

Getting started with mobile banking security

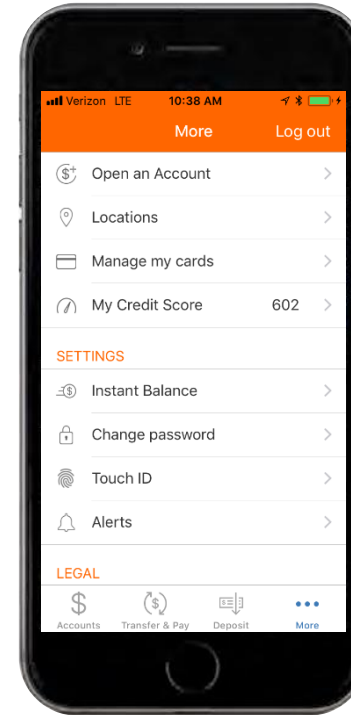

When you log in with your mobile device, you are accessing the same multi-layer security that is used when logging in from your desktop computer.

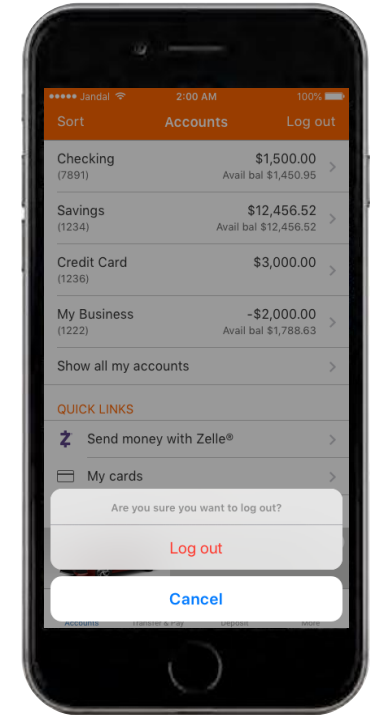

We confirm your credentials and your device when logging in. As an added layer of security, you may be asked to answer one of your security questions before you are securely logged in.

The strong approach to security provides simple and convenient access to your accounts, and powerful protection against online fraud. You will be taken to your **“Accounts”** page directly after logging in.

Tap on the **“More”** button at the bottom of your screen to change your password and manage your accounts.

When you want to log out of your app, tap the **“Log out”** button at the top right of your screen. You will be directed back to the log in page.
